

We are pleased to announce that the upcoming **International Conference on Hydroinformatics (HIC 2014)**, to be held in **New York (USA), 17-21**

August 2014

, will host a Mini-Symposium on “**Evolutionary Polynomial Regression for data-mining application in Hydro-Engineering**”

see the [Official Announcement \(pdf\)](#)

As you may know, the Evolutionary Polynomial Regression paradigm for data-mining has been introduced in 2006 in the Hydroinformatics community although the increasing interest on it has progressively involved many other scientific communities.

This Mini-Symposium is dedicated to people who are using EPR for their scientific activities in hydro-engineering and those who are interested in knowing its potentialities.

So, we encourage you to share your experience with the EPR community and provide your contributions for its future developments.

If you are interested, submit an abstract on the HIC 2014 conference website (<http://hic2014.org/>).

Hope to see you in New York next year!
